Top 6 Features You Must Consider While Choosing a Delivery Routing Software for Your CEP Business
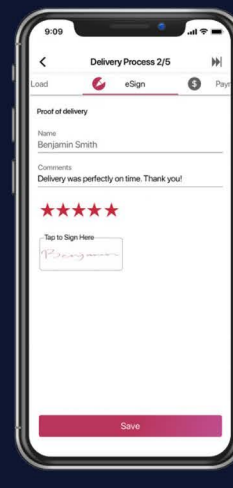

Efficient Mobile Application for Drivers

As drivers are the people who get the actual work done, having a mobile application that offers transparency, clear understanding about the orders and their incentives is mandatory.
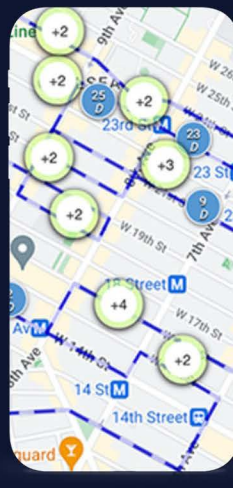

Real-time Tracking Facility

Customers wish to have every update about their deliveries. Having a real-time tracking feature is essential to keep the customers updated with minimum communication.
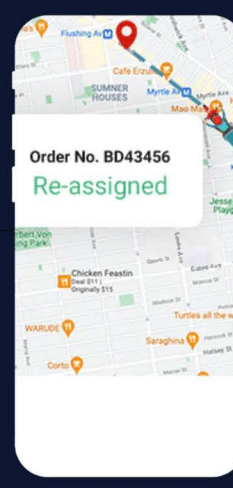

Automated Proof of Delivery

With numerous orders being processed and packages delivered everyday, having an automated electronic proof of delivery documentation eliminates errors and offers convenience on the go.
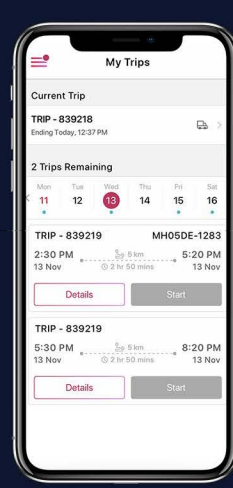

Route Optimization and Planning

1000s of orders throughout various locations and no planning of route can cost time as well as fuel. The route optimization feature helps in making faster deliveries in a cost efficient manner.

Auto Allocation Feature

Timely delivery is the most important aspect that creates an impact on the customer. The auto allocation feature allows identifying the most suitable drivers for a specific delivery to reach in time.

Delivery Time Window

Not every customer is always at home to receive their important delivery packages. Offering a delivery time window option helps them in receiving their own deliveries in the first attempt.

Factors to Focus on for Making Successful Deliveries

Geographical Distance	Traffic Patterns	Weather Conditions	Customer Preferences
Driver Availability	Start and End Locations	Customer Availability	Vehicle Capacity

How can a Delivery Routing Software Contribute to The Growth of a CEP Business?

Faster Delivery of Orders	Increased Customer Satisfaction	Reduced Transportation Costs	Increased Productivity

Before investing in a Delivery Routing Software for your CEP business, if you're considering all these features, we've a full-fledged solution for you!
